

Artificial Imagination

This captivating, new book mixes technology and art together into a fascinating and philosophical combination. The book follows one high-tech immigrant's journey through United States as he graduates from University of California and ventures from Silicon Valley to Seattle, Nashville and back to California in a quest for his dream job and his search for a place which accepts him, a place he could call home. The story is purportedly narrated by an artificial intelligence program with the ability to simulate human creativity, sense of humor and spirit of adventure. Technology is all brain, no heart, all cold logic, and no warm soul, or is it? This gem of a book reminds us that technology could not exist were it not for boundless creativity, and it does this in such a way as to also remind us that without that very same creativity, there would be no art, no literature.

Artificial Imagination on Vimeo Secretive AI Startup Pioneers Artificial Imagination. By Tiffany Trader. May 26, 2016.
