

prophet: surf 5,509 .com websites

This book contains search results NOT FOUND anywhere on the internet! This is a unique and refreshing change in perspective. Ever wonder what youre NOT SEEING when you use a search engine? Search engines frequently ignore websites that - - are for sale - were visited before content was finalized - are parked and awaiting content - have a login screen - have flash, video, or music as the primary elements - have poorly utilized keywords in the homepage content - Search engines also leave a TRAIL of your searches on your home and/or office computer!! ++ Would you like to avoid having a SEARCH ENGINE TRAIL? + Thinking of building your own website? + Wondering which names are available and which which arent? + Would you like to see what your competitors are doing for content? + Would you like to get some design ideas? + Would you like to surf a keyword for entertainment? + Would you like a fast, easy and inexpensive way to add a links section to your website? + This research book solves those problems! The website name itself doesnt change. Its always the same. Its the book title of the website and is known as a domain name. The master list of domain names, and other name server information, is maintained in whats called a zone file. Each domain (COM, ORG, GOV, etc) has a zone file. The COM zone file contains nearly 127 million unique domain names. And this information isnt looked at by search engines. So, youre interested in a particular topic ... this subject is whats called a keyword. The COM

zone file can be searched for domain names that include your keyword. Using a very well-defined and specific keyword will sometimes return only a handful of domain names ... sometimes thousands. Using a wildcard as part of your keyword will often greatly increase the size of the returned list. This book contains the list of domain names containing a particular keyword. The list in this book is NOT hyperlinked (ie, externally linked to the internet). The list is provided for your research purposes. Now what? You have a long, long list of domain names. Time to cut and paste the domain name into your web browser? Fortunately, youre not Fred Flintstone and this isnt Bedrock! To make this domain name list user-friendly, Ive added a click here to download the hyperlinked version of the book file ... each domain name on the list is hyperlinked to its corresponding website. Download the file. When you see an interesting domain name, just click on it and the website pops up in your browser (assuming, of course, that youre connected to the internet). Thats what this book is all about. Using a keyword, the COM zone file was searched, a list of matching domain names was created and then hyperlinked. This list doesnt vary much over time, so youll still be surfing when the contents are updated (Amazon will notify you when its updated). Using the hyperlinked list, you **DONT LEAVE A SEARCH TRAIL BEHIND** on your computer! At a bare minimum, you have a resource that will provide hours and hours and hours of entertaining internet surfing. Its a **GREAT GIFT** idea! Surprise that special person.

Please take a moment, click on author (my name) to take a look at some of the other titles available. Thank you. Enjoy!
