

The Influence of Catholicism on the Sciences and on the Arts (Classic Reprint)

Excerpt from The Influence of Catholicism on the Sciences and on the Arts It seems incredible that in the so-called enlightened nineteenth century there should have been found a single person to attempt to maintain that the Catholic Religion is hostile to the arts and sciences. It must needs be that such a person simply closes his eyes to history, in order to make so rash and unjust an accusation. The modern philosophers, supporting their accusations upon some texts of Holy Scripture, and of the Holy Fathers falsely interpreted, have no hesitation to repeat daily with insolent superiority of manner: Is it not evident that the Catholic Religion is opposed to the unfolding of intelligence? The attack could not be more gross or more insidious. Time has proved the charge to be an absurd accusation, and the truly learned men of the day are fully convinced that the Holy Catholic Religion is superior to all others, not only on account of the resplendent lights with which she has adorned the world, but for the extraordinary and incontestable progress which she has so brilliantly effected in human reason. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
